

To Run the Tool

1. First choose the method of selecting sites for analysis
2. Click on the map to choose site(s) using the method. Use drag or zoom on move map to find desired area.
3. Click this button to generate or refresh analysis

Once you've generated a report, go to other tabs to see results of analysis

Options

- a. If running a new report, click to clear all previously selected sites.
- b. Toggle to change report for individual sites or average results across BGC subzon/variant
- c. Change default settings for climate model and time period weighting for generating CCISS future feasibility ratings
- d. Use Find-A-BEC to highlight the selected BGC on the map
- e. Change background map layers
